# ZITHA TECH SPECIALTY CABLES (Pty) Ltd

# 10 Gigabit Optical Cable Single-mode and Multimode Wavelengths

## Overview

Cisco 10GBASE SFP+ Modules Data SheetCisco SFP+ Active Optical Cables (Figure 5) are direct-attach fiber assemblies with SFP+ connectors. They are suitable.

## Key Takeaways

10 Gigabit Ethernet uses 850 nm for multimode fiber and 1310 nm or 1550 nm for single-mode fiber, with each wavelength optimized for specific distances and applications.Multimode Fiber (MMF)

Multimode fiber is typically used for short-distance 10GbE links. It has a larger core (~50 µm) and supports multiple light modes, which makes it cost-effective but limits high-speed performance over long distances. The standard wavelength for 10G multimode SFP+ transceivers (10GBASE-SR) is 850 nm, using VCSEL lasers .

• Fiber types: OM3 and OM4

• Typical distances:
• OM3: up to 300 meters

• OM4: up to 400 meters

• Applications: Data centers, enterprise networks, and high-density switch environments where short-range, high-speed connectivity is required .

© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved

• Considerations: Modal dispersion and higher insertion loss limit the effective distance, making multimode less suitable for links above 400 meters .
Single-mode Fiber (SMF)

Single-mode fiber is designed for long-distance 10GbE links. It has a small core (~9 µm) that allows only one propagation mode, minimizing modal dispersion and enabling higher bandwidth over longer distances. Single-mode fiber uses 1310 nm or 1550 nm wavelengths .

• 1310 nm wavelength:
• Uses uncooled DFB lasers

• Lower cost

• Typical distances: several hundred meters up to ~40 km

• Common for metro and campus networks

• 1550 nm wavelength:
• Uses EML lasers with cooling

• Higher cost and power consumption

• Typical distances: 40–80 km

• Suitable for long-haul and carrier networks

Key DifferencesFeatureMultimode (MMF)Single-mode (SMF)Core size~50 µm~9 µmWavelength850 nm1310 nm / 1550 nmMax distance300–400 m40–80 kmCostLowerHigherDispersionModal dispersion limits distanceMinimal dispersion, ideal for long distancesUse caseShort-range, cost-sensitiveLong-range, high-performance, future-proof Practical Considerations
• SFP+ modules must match the fiber type and wavelength; mixing SMF and MMF can cause link failure .

• Mode-conditioning patch cords may be required for certain multimode links using 10GBASE-LX4 to reduce differential mode delay .

• Link power budget and insertion loss should be calculated to ensure reliable operation, especially for distances approaching the maximum supported range . In summary, 850 nm multimode fiber is ideal for short-range 10GbE connections, while 1310 nm and 1550 nm single-mode fibers are used for longer distances, with 1550 nm preferred for very long-haul applications due to lower attenuation. Proper fiber selection, wavelength matching, and link budget planning are essential for optimal 10GbE network performance.

Cisco 10GBASE SFP+ Modules Data Sheet

Cisco SFP+ Active Optical Cables (Figure 5) are direct-attach fiber assemblies with SFP+ connectors. They are suitable

10GBASE-SR Single Mode or Multimode? Complete Guide

Is 10GBASE-SR single-mode or multimode? Learn the fiber type, reach, wavelength, SR vs LR differences,

10 Gigabit Ethernet Fiber Design Considerations

In addition, decisions may have to be made regarding whether to use single-mode or multimode fiber. This paper has introduced

Multimode SFP+: 10GBASE-SR Specs, Fiber Types and Use Cases

The primary differences between single-mode and multimode SFP+ modules include fiber design, transmission

Cisco 10GBASE SFP+ Modules Data Sheet

Cisco SFP+ Active Optical Cables (Figure 4) are direct-attach fiber assemblies with SFP+

Optical Fiber and 10 Gigabit Ethernet

A single-mode fiber, having a single propagation mode and therefore no intermodal dispersion, has higher bandwidth than multimode

Optical Fiber and 10 Gigabit Ethernet

The alternative is to use single-mode fiber over a 10GBASE-L or 10GBASE-E interface or the 10GBASE-LX4 interface, which

Single-Mode vs Multimode Fiber: Which Do You Need?

Complete comparison of single-mode and multimode fiber optic cable. Core diameter, distance limits,

cabling

Within a data center, it''s typical to use multimode which can get you 300-400 meters. If you have very long runs or are

10 Gigabit Ethernet Fiber Design Considerations

*© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved*

A connection consists of a mated pair of optical connectors. An allocation of 1.5 dB is budgeted for connector and splice losses for

Single Mode vs Multimode Fiber Cable

Multi-Mode Optical Fiber Cable : Multimode fiber cables are the type of fiber cables that transmit data via their core of

Optical Fiber and 10 Gigabit Ethernet

Outside of cabling and mechanical specifications, which are equally addressed in the standards, the primary optical specifications

Single Mode vs Multimode Fiber: What''s the difference?

In our Single Mode vs Multimode fiber text we take a look at different fiber optic cable types and which of them are

Multimode Fiber: OM1 to OM5 – MapYourTech

What is Multimode Fiber? Multimode fiber is an optical fiber designed with a larger core diameter (typically 50 or 62.5 micrometers)

Multimode Fiber Types: OM1 vs OM2 vs OM3 vs OM4 vs OM5

How Many Types of Multimode Fiber? Identified by ISO 11801 standard, multimode fiber optic cables can be classified

Multimode vs Single Mode Fiber Optic Cables: A Complete Guide to

Learn the differences between multimode (OM1-OM5) and single mode (OS1-OS2) fiber optic cables—speed,

Fiber Optic Cable Types: Single Mode vs. Multi-Mode Fiber Cable

The primary distinction between single mode and multi-mode fiber optic cable is the fiber core diameter, wavelength &

The Ultimate Guide to Multimode Fiber Optic Cable

Single-mode fiber optics and multimode fiber optic cables differ in their core dimensions and

Fiber Optic Cable Types – Multimode and Single Mode

Single mode fiber is the standard choice for high data rates or long distance spans and can carry signals at much higher speeds than

Understanding 1310nm Fiber: A Comprehensive Guide

*© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved*

What distinguishes single-mode 1310nm fiber from multimode fiber? The primary difference

Fiber Optic Cable Types: Single Mode vs. Multi-mode Fiber Cable

The primary distinction between single mode and multi-mode fiber optic cable is the fiber core diameter, wavelength &

Fiber Facts—Yes, You Do Need to Read This

Fiber modes and cable specifications can be a lot for network architects to absorb; but there are a few fiber facts you

Single-mode Fiber and 10 Gigabit Ethernet

Single-mode Fiber and 10 Gigabit Ethernet Standard single-mode fiber can address nearly any application, depending on the level of

Single-Mode vs. Multimode Fiber Cable: A Direct Comparison of

Cost Considerations Various factors, including core diameter, cable length, and transceiver compatibility, influence the cost of fiber

Fiber Optic Cable Types – Multimode and Single Mode

The Optical Core – a glass tube (core) propagates the light signals through the fiber cable. Glass is inherently reflective and is a
