A type of optical cable sheath

Overview

So far there are 6 types of sheathing for fibre optic cables, these are PE (Polyethylene), LSZH (Zero halogen compound), PVC (Polyvinyl chloride), PUR (Polyurethane), PA (Polyamide), NBR (Nitrile rubber formulated with PVC), ETFE (Ethylene tetrafluoroethylene). Sheathing has three core values for use in fiber optic design: Protect the fiber. Keep ambient or stray light from creating signal noise (for sensor applications). When individual fibers break, light transmission and uniformity. OFNP is the outer sheath material of optical cables used in air circulation spaces in buildings (such as ceiling mezzanines, ventilation ducts, etc. Its primary functions. Whether you are designing and manufacturing a new cable or simply choosing an existing one for data, power, fiber optics, or industrial automation, the outer sheath (jacket) is much more than just a speaking cover to the eye; it is, in fact, an important job holder in mechanical protection. In this article, we will discuss the different types of outer sheath materials used in indoor fiber optic cables and the fire prevention levels associated with each type. At the same time, it must have.
