ZITHA TECH SPECIALTY CABLES (Pty) Ltd

Brazilian Outdoor Cable Tray Styles

Overview

An energy distribution system in a property must take into account the cable trays, profiles and ducts that will be used.

Key Takeaways

Outdoor cable trays in Brazil typically include ladder, perforated, solid-bottom, and wire mesh styles, made from galvanized steel, aluminum, stainless steel, or FRP to withstand environmental and corrosive conditions.Common Outdoor Cable Tray Types

1. Ladder Cable Trays Ladder trays feature two longitudinal side rails connected by transverse rungs, providing excellent ventilation and support for heavy power cables over long spans. They are ideal for outdoor installations where heat dissipation is critical, such as industrial plants and commercial buildings in Brazil . 2. Perforated Cable Trays Perforated trays have a solid base with regularly spaced holes, offering moderate ventilation while supporting mixed cable types. They are suitable for outdoor areas where some protection from debris and moisture is needed, balancing airflow and cable support . 3. Solid-Bottom Cable Trays These trays provide complete protection for sensitive or control cables, shielding them from dust, rain, and contaminants. Solid-bottom trays are often used in outdoor installations near industrial zones or areas with high pollution, though drainage must be considered to prevent water accumulation . 4. Wire Mesh (Basket) Trays Wire mesh trays are lightweight, flexible, and highly ventilated, making them suitable for telecommunication, data, and control cables. Their open structure allows easy installation and future modifications, which is advantageous in dynamic outdoor environments .

Material Considerations for Brazilian Outdoor Use
• Galvanized Steel (HDG): Offers good corrosion resistance and mechanical strength at a lower cost, suitable for general outdoor use .

• Aluminum: Lightweight, corrosion-resistant, and ideal for coastal or humid regions .

• Stainless Steel (316SS): Superior resistance to saltwater, chemical fumes, and acidic rain, recommended for harsh marine or industrial environments .

• Fiberglass Reinforced Plastic (FRP): Non-conductive, UV-resistant, and chemically inert, suitable for areas with high chemical exposure or direct sunlight .
Environmental and Operational Factors

When selecting outdoor cable trays in Brazil, consider:

• Corrosive exposure: Coastal salt spray, industrial chemical fumes, and acidic rain.

• Temperature range: Ambient heat and solar radiation affecting cable ratings.

• Mechanical load: Total cable weight and future expansion.

• Impact resistance: Protection from falling debris or equipment.

• Electrical requirements: Shielding needs for sensitive control or data cables .
Market Context

The Brazilian cable tray market is growing rapidly, driven by industrial, commercial, and infrastructure projects. Outdoor cable trays are essential for high-rise buildings, industrial plants, data centers, and transportation infrastructure, ensuring organized, safe, and durable cable management .

Summary

© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved

For Brazilian outdoor installations, ladder trays are preferred for heavy power cables, perforated trays for mixed cable types, solid-bottom trays for sensitive cables, and wire mesh trays for data and control wiring. Material selection—galvanized steel, aluminum, stainless steel, or FRP—depends on environmental exposure, corrosion risk, and mechanical requirements, ensuring long-term durability and compliance with safety standards .
