ZITHA TECH SPECIALTY CABLES (Pty) Ltd

Cable tray internal partition

Overview

Cable tray system dividers buy Partitions and dividers for cable support systems, cable trays and control cabinets. Strong brands, wide selection and fast.

Key Takeaways

Internal partitions in cable trays organize, separate, and secure cables, improving safety, airflow, and maintenance efficiency.Purpose of Internal Partitions

Internal partitions, also called dividers, are installed within cable trays to segregate different types of cables, such as power, control, and communication lines. This separation reduces electromagnetic interference (EMI), prevents tangling, and ensures easier maintenance and future expansion of the cable system . Partitions also help maintain proper fill limits, ensuring that trays are not overloaded, which could lead to overheating or mechanical stress .

Types of Partitions
• Wire Mesh Partitions: Constructed from open grid-like structures, wire mesh partitions provide flexibility, allowing easy adjustments to cable routes and quick addition or removal of cables. They also enhance airflow, reducing heat buildup in high-density installations, and minimize dust accumulation .

• Solid or Plastic Dividers: These are used in environments where visual aesthetics or additional protection is required. Solid partitions can prevent accidental contact between cables and provide extra mechanical protection .

• Metal Dividers: Often used in industrial settings, metal partitions offer robust separation and can contribute to grounding if the tray is metallic .
Installation Considerations
• Spacing: Partitions should be installed according to cable size and type, maintaining proper separation to comply with standards and prevent interference .

• Material Selection: Choose materials based on environmental conditions, such as corrosion resistance for outdoor or humid environments. Aluminum, stainless steel, and FRP (fiberglass reinforced plastic) are common choices .

• Compliance: Ensure partitions meet NEC Article 392 and other relevant standards for safety, grounding, and load capacity .
Benefits
• Improved Organization: Keeps cables neatly arranged and easily identifiable.

• Enhanced Safety: Reduces risk of overheating, fire, and mechanical damage.

• Better Airflow: Wire mesh partitions allow natural ventilation, critical in high-density or heat-sensitive installations.

• Ease of Maintenance: Facilitates cable addition, removal, and troubleshooting without disturbing other cables .
Applications

Internal partitions are widely used in data centers, industrial facilities, commercial buildings, and control rooms, where multiple cable types coexist and proper separation is essential for performance and safety . By implementing internal partitions, cable tray systems become more organized, safer, and adaptable, supporting long-term reliability and compliance with electrical standards.
