Classification of Fiber Optic Patch Cord Connectors

Overview

A fiber optic patch cord —also known as a fiber jumper—is a fiber cable terminated with connectors on both ends.

Key Takeaways

Fiber optic patch cord connectors come in various types including SC, LC, FC, ST, MPO, MU, MT-RJ, and E2000, each suited for specific applications and network requirements.Common Connector Types
• SC (Subscriber Connector / Standard Connector): A push-pull connector widely used in data centers and telecom networks. It is known for its durability and ease of use, often used in single-mode and multimode applications .

• LC (Lucent Connector / Little Connector): A small form-factor connector, commonly used in high-density environments like modern data centers. LC connectors are duplex and fit QSFP transceivers via LC breakouts .

• FC (Ferrule Connector): A screw-on connector providing high precision and low signal loss, often used in single-mode fiber for long-distance or high-vibration environments .

• ST (Straight Tip): A bayonet-style connector, commonly used in legacy networks and multimode fiber applications. It is easy to connect and disconnect but less common in modern high-density setups .

© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved

• MPO/MTP (Multi-Fiber Push-On / Multi-Fiber Termination Push-On): High-density connectors that support multiple fibers in a single connector, ideal for backbone and data center interconnects .

• MU (Miniature Unit): A small form-factor connector similar to SC but designed for high-density applications, often used in telecom and FTTH networks .

• MT-RJ (Mechanical Transfer Registered Jack): Duplex connector with two fibers in a single ferrule, used in older high-speed networks and some multimode applications .

• E2000: High-performance connector with a spring-loaded shutter for dust protection, commonly used in single-mode networks requiring low insertion loss .
Additional Considerations
• Single-mode vs Multimode: Single-mode connectors (yellow jacket) are used for long-distance communication, while multimode connectors (OM1/OM2 orange, OM3 aqua, OM4 violet, OM5 lime green) are used for short-distance, high-bandwidth applications .

• Simplex vs Duplex: Simplex patch cords have a single fiber, while duplex cords have two fibers for bidirectional communication .

• Jacket Types: PVC for basic indoor use, Plenum (OFNP) for fire-resistant air ducts, Riser (OFNR) for vertical shafts, and LSZH for low smoke and toxic gas emissions in high-safety areas .

• Polish Types: UPC (Ultra Physical Contact) and APC (Angled Physical Contact) affect return loss and are important for high-performance single-mode networks . Choosing the right connector depends on network density, fiber type, distance, and environmental requirements, ensuring optimal performance and minimal signal loss in your optical network .
