ZITHA TECH SPECIALTY CABLES (Pty) Ltd

Concrete Mixing Plant Electrical Distribution Box Manufacturer

Overview

We offer a variety of different designs including one piece, three piece, and multi-piece configurations.

Key Takeaways

Reliable electrical distribution boxes for concrete mixing plants are offered by manufacturers such as ENERGYBOX, Wieland, and integrated solutions from concrete plant suppliers like ELKON and Semix.ENERGYBOX Assemblies

ENERGYBOX provides pre-wired Assemblies for Construction Sites (ACS) that are suitable for temporary or permanent installation at concrete batching plants. These distribution boards are made from a sturdy two-component technopolymer cabinet with a fire-resistant backrest, allowing them to withstand harsh construction environments. They can be wall-mounted or installed on supports, making them flexible for different plant layouts. ENERGYBOX boards are ideal for civil building sites, outdoor events, and temporary electrical distribution, ensuring safety and reusability across multiple projects (Palazzoli) .

Wieland Distribution Boxes

© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved

Wieland offers decentralized electrical distribution boxes designed for industrial and building applications, including concrete plants. Their solutions support power, signal, and automation distribution, and are compliant with IEC 61439 and IEC 61535 standards. Wieland boxes are engineered for moisture resistance, pluggable installation, and flexible configuration, making them suitable for the demanding conditions of concrete batching operations. They also enable short planning and realization times through prefabrication and modular design (Wieland) .

Concrete Plant Manufacturers with Integrated Electrical Solutions

Manufacturers like ELKON and Semix produce concrete batching plants that often include customizable electrical distribution systems as part of their plant setup. ELKON provides bespoke concrete batching plants with all components manufactured in-house, ensuring high-quality, safe, and efficient electrical integration. Semix offers mobile and stationary plants with advanced control systems, which include precise electrical distribution for mixers, conveyors, and pumps, ensuring reliable operation on-site (ELKON) .

Key Considerations

When selecting an electrical distribution box for a concrete mixing plant, consider:

• Load capacity: Ensure the box can handle the total power requirements of mixers, pumps, and auxiliary equipment.

• Durability: Choose materials resistant to dust, moisture, and mechanical impact.

• Compliance: Verify adherence to relevant electrical standards (IEC or local regulations).

• Flexibility: Modular or pre-wired solutions allow easier installation and future expansion.

• Integration: For turnkey concrete plants, consider manufacturers that provide integrated electrical systems for seamless operation. By choosing from these manufacturers, concrete plant operators can ensure safe, reliable, and efficient electrical distribution tailored to the demanding environment of concrete production.
