Diagram of main switch installation method for distribution box

Overview

Hey, in this article we are going to see the Single Phase Distribution Box Wiring Diagram and Connection Procedure.

Key Takeaways

The main switch in a distribution box is installed as a double-pole MCB or isolator at the incoming supply, feeding the RCCB and branch MCBs, with proper busbar, neutral, and earth connections.Components and Layout
• Main Switch (MCB/Isolator): Installed at the top or leftmost position of the distribution box. It disconnects the incoming supply (phase and neutral) from the entire board. For single-phase domestic installations, a double-pole 63A MCB is commonly used .

• RCCB (Residual Current Circuit Breaker): Connected immediately after the main switch to provide protection against leakage currents, electrical shocks, and insulation faults. The RCCB's rating should match the main switch, typically 30mA for domestic use .

• Branch MCBs: Single-pole MCBs are used for individual circuits (lighting, sockets), while double-pole MCBs may be used for special loads. The output of the RCCB feeds these MCBs .

• Busbars and Links:
• Phase busbar distributes the live wire to all MCBs.

© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved

• Neutral bar connects all neutral wires from branch circuits.

• Earth bar connects the supply earth, load earths, and metallic enclosure for safety .

Wiring Method
• Incoming Supply: Connect the phase and neutral from the meter to the main switch input.

• Main Switch to RCCB: Connect the output terminals of the main switch to the input of the RCCB.

• RCCB to Branch MCBs: Connect the RCCB output to the input of each branch MCB.

• Neutral Connections: All neutral wires from branch circuits connect to the neutral bar.

• Earth Connections: Connect the supply earth, load earths, and metallic enclosure to the earth bar .
Wiring Practices
• Wire Color Coding: Phase (L) – red/yellow, Neutral (N) – blue, Earth (PE) – green/yellow .

• Wire Size: Typically 2.5mm² for lighting and sockets, 4mm² for high-load appliances like AC .

• Arrangement: MCBs arranged left to right; main switch on the left, reserved positions on the right. Wiring inside the box should be neat, tied with plastic ties, and follow left-to-right routing for incoming and outgoing circuits .

• Safety Checks: After installation, inspect for short circuits, proper grounding, and correct breaker ratings .
Simplified Diagram Representation

Incoming Supply (L, N) | +----+----+ | Main MCB | +----+----+ | +----+----+ | RCCB | +----+----+ | +----+----+----+----+ | MCB1 | MCB2 | MCB3 | +----+----+----+----+ | Outgoing Circuits | Neutral Bar & Earth Bar

This layout ensures safe isolation, protection, and organized distribution of electrical power in a residential or small commercial distribution box .
