Distribution box protruding and obstructing

Overview

If your outdoor electrical breaker box cover will not close all the way, the most common causes include misaligned hinges, protruding internal wiring, or a warped latch mechanism. Ensuring the door is fully sealed is critical to prevent moisture ingress, corrosion, and potential. In modern power systems, distribution boxes are the core equipment for power distribution and control, and their stable operation is crucial to ensuring the safety and reliability of power supply. However, in actual applications, distribution boxes often encounter a series of problems, which not. The left side of the box is probably mounted to the stud so grab a longer drywall or deck screw, I think 3” long and go in through one of the holes in the back of the box at an angle left and drive the screw into the stud. Stop tightening once the box is pulled in on the right. When ya know, ya. Any obstruction placed in the light path of an imaging system prevents waves from a portion of the wavefront to reach the focal zone.
