Factory cable tray spacing

Overview

Support spacing for cable trays must align with the manufacturer's instructions, as outlined in NEC 392. Generally, standard trays require supports every 6 to 10 feet, while heavy-duty, long-span trays can handle distances of up to 20 feet between supports. maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray cont d for instrumentation and control applications that require. Cable tray spacing is a critical aspect of electrical infrastructure, influencing both safety and efficiency. All illustrations, descriptions and technical information included in this document are provided as indications and can cable trays are equivalent.
