Forced placement of fire protection distribution box

Overview

Choose the right box based on environment (indoor/outdoor), load capacity, and durability. Check for proper IP/NEMA ratings and material quality. Fire alarm pull stations are manual devices installed in public buildings to allow occupants to trigger the fire alarm system in case of a fire. It takes the incoming power and safely distributes it to different circuits throughout your building. However, the key to. anually initiate a fire alarm by closing listed contacts that signa ble-action permitted; listed p otective cover ivates the system and a manual means exists at a constantl t on each floor; within 5 ft (1. 5 m) of exit doorway along normal egre clear floor space; one-hand operation; no tight. Locating fire alarm control panels can be challenging, especially when space is limited or the building owner prefers not to place them at the main entrance. Source: Potter These systems can also be activated by.
