ZITHA TECH SPECIALTY CABLES (Pty) Ltd

Galvanized iron wire for binding optical cables

Overview

Hot-dipped galvanized steel wires are a popular choice for binding applications due to their excellent corrosion resistance and durability. The zinc coating, applied through a hot-dip process, protects against rust and other forms of corrosion, making them ideal for harsh. Our galvanised iron wire is processed from quality carbon steel wire materials meeting ASTM A641 and other international standards set for Zinc–Coated (Galvanized) Carbon Steel Wire. Galvanized Iron Wire Materials: low carbon steel, medium carbon steel or high carbon steel. used in the manufacture of semi-finished form of ropes, springs, ropes, nets, electrodes and wiring. used in the manufacture of woven mesh netting and suspension of. Galvanizing Technology: Galvanizing is a corrosion protection process for steel or iron, in which the substrate is coated with zinc to prevent it from rusting. The galvanization process entails immersing clean, oxide-free iron or steel into molten zinc in order to form a zinc coating that is. Electro galvanized wire is supplied in forms of coil wire, spool wire, cut wire or U type wire. Common gauge range: BWG6 - 22 - 34. The wear- design ensures long-term durability, even in harsh environments.
