ZITHA TECH SPECIALTY CABLES (Pty) Ltd

Green electrical distribution box by the roadside

Overview

These green boxes are formally known as pad-mounted transformers or utility pedestals, and their purpose is to manage the flow of electricity to multiple homes. They are placed where underground primary power lines run, often located within a utility easement on private property. A green telecommunications box is a weatherproof metal cabinet housing essential telecommunications equipment that connects individual properties to the main network infrastructure. Seeing such a foreign object on or near your property naturally raises questions about its purpose and, more importantly, its safety. These unassuming cabinets, regulated by entities such as the National Electrical Code, are critical components of the power grid managed by your local utility company.
