How should the fiber optic cable be removed

Overview

How to Safely Remove a Fiber Optic Cable From a ModemMaster the precise, safe technique for detaching fragile glass fiber cables from your modem, ensuring.

Key Takeaways

To remove a fiber optic cable safely, power down your devices, identify the connector type, release the locking mechanism, and pull the connector straight out while protecting the exposed fiber ends.Step-by-Step Guide

1. Power Down Devices Before handling any fiber optic cables, turn off your modem, ONT, or fiber gateway and unplug it from the electrical source. This prevents exposure to infrared laser light and protects internal electronics from damage . 2. Prepare Your Workspace Ensure the area is clean and free of dust or debris. Even microscopic particles can damage the glass tip of the fiber connector . 3. Identify the Connector Type Common residential connectors include:

• SC (Subscriber Connector): Rectangular, push-pull mechanism with a plastic tab .

• LC (Lucent Connector): Smaller, uses a clip or latch that must be squeezed .

• ST (Straight Tip): Twist-and-lock bayonet style . Knowing the connector type helps you release it correctly without applying excessive force. 4. Release the Connector

• SC connector: Depress the plastic tab on top until the lock disengages .

© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved

• LC connector: Squeeze the clip inward toward the connector body .

• ST connector: Twist the connector counterclockwise to unlock . 5. Remove the Cable Grasp the connector body, not the thin cable jacket, and pull straight out along the axis of the connector. Avoid bending, twisting, or pulling at an angle to prevent fiber damage . 6. Protect Exposed Ends Immediately cover the exposed fiber tip with a dust cap or place it in a clean, protected environment. Also, cover the empty port on the modem with a blank dust plug if available . 7. Inspect and Test After removal, inspect the cable and connectors for damage. If you plan to reconnect later, ensure the fiber ends are clean and free of debris to maintain signal quality . 8. Seek Professional Help if Needed If the connector is stuck, damaged, or recessed, contact your ISP or a certified technician to avoid permanent damage . By following these steps carefully, you can safely remove fiber optic cables without damaging the delicate glass fibers or compromising your network equipment.
