How to Choose a Good or Bad Fiber Optic Router

Overview

After analyzing nine models ranging from compact VPN-focused units to enterprise-grade edge routers, I've mapped the specs that matter most when choosing the best routers for fiber optic. Fiber optic internet demands a router that can handle symmetric throughput without dropping. A fiber-optic connection is the best choice for fast home internet as it has a number of advantages compared to traditional copper cables, such as faster speeds and less interference. Many major ISPs, such as Verizon and Xfinity, offer fiber connections directly to your door, known as FttP or Fiber. Our top overall pick is the Netgear Nighthawk RS700S, a Wi-Fi 7 router built for multi-gig fiber plans that handles up to 200 devices across 3,500 square feet. For budget-conscious households, the TP-Link Archer AX55 delivers reliable Wi-Fi 6 performance without the premium price tag. Fiber. Fiber internet delivers the fastest speeds — up to 5Gbps. I'm Fazlay Rabby — the founder and writer behind Thewearify.
