How to connect the neutral wire in the distribution box

Overview

In this video, we''ll walk you through the process of wiring a home distribution box with a detailed connection diagram.

Key Takeaways

To connect a neutral wire, strip the insulation, insert it into the neutral busbar, and securely tighten the terminal screw while following safety precautions.Preparation

Before starting, turn off the main power supply to prevent electric shock. Gather necessary tools and materials: neutral wire busbar, insulated wires, screwdrivers, wrenches, wire strippers, multimeter, and insulating tape . Ensure the neutral busbar matches the distribution box design and the electrical load.

Installation Steps
• Inspect the Distribution Box: Check for damage, deformation, or insufficient space. Identify the location for the neutral busbar, usually on a dedicated rail or side plate .

• Mount the Neutral Busbar: Use a screwdriver or wrench to firmly fix the busbar in place.

• Prepare the Neutral Wire: Strip 10–15 mm of insulation from the incoming neutral wire using a wire stripper .

• Connect the Wire: Insert the stripped wire into the inlet hole of the neutral busbar. Tighten the screw to ensure a secure connection. Only one wire should be connected per terminal to avoid poor contact .

• Branch Circuit Connections: For each outgoing circuit, strip the wire insulation and insert it into the corresponding outlet hole of the neutral busbar. Tighten the screws securely .

• Insulate Connections: Wrap each connection point with insulating tape to prevent accidental contact or leakage .
Safety and Final Checks
• Verify all connections are tight and properly insulated.

• Use a multimeter to check continuity and ensure no short circuits exist .

• Label the neutral and phase wires clearly, following standard color codes (neutral is typically blue, phase wires vary by system), .

• Conduct a final safety inspection before restoring power. Following these steps ensures a safe, reliable, and code-compliant connection of the neutral wire in a distribution box.
