# How to connect the switch wires in the distribution box

## Overview

How to Wire a Home Distribution Box Welcome to our channel! In this video, we'll walk you through the process of wiring a home distribution box with a Sing.

## Key Takeaways

To connect wires to a switch in a distribution box, connect the incoming phase wire to the switch input, the outgoing wire to the load, and ensure neutral and earth wires are properly linked to the neutral and earth bars.Step-by-Step Wiring Process

1. Identify Components:

• Locate the main MCB, RCCB, and individual load switches (single-pole or double-pole MCBs).

• Identify the neutral link and earth bar inside the distribution box . 2. Connect the Main Supply:

• Connect the phase (live) and neutral wires from the incoming power supply to the input terminals of the main MCB.

• Connect the earth wire from the supply to the earth bar . 3. Wiring Through RCCB (if used):

• Connect the output of the main MCB to the input of the RCCB.

• For single-pole load MCBs, connect only the phase wire from the RCCB output to the MCB input.

• For double-pole MCBs, connect both phase and neutral wires from the RCCB output to the MCB input . 4. Connecting the Switch to the Load:

• Connect the phase wire from the switch output to the phase terminal of the load.

• Connect the neutral wire from the load to the neutral link.

• Connect the earth wire from the load to the earth bar . 5. Organize and Secure Wires:

• Route wires neatly: incoming wires on the left, outgoing wires on the right.

• Use plastic ties to bind wires, keeping them straight and evenly spaced .

• Clearly mark AC, DC, or voltage levels for safety and future maintenance . 6. Safety Check:

• After wiring, perform a safety inspection to ensure there are no loose connections, short circuits, or overload risks.

• Make sure the metallic body of the distribution box is earthed to prevent electric shock . By following these steps, you can safely connect wires to switches in a distribution box while maintaining proper organization and grounding. Always ensure the power is turned off before starting any electrical work.
