How to stretch cables and optical fibers a little longer

Overview

So in essence, fiber optic splicing is a process used to join two separate fiber optic cables together. This allows for longer distances to be covered without loss of signal quality. Below are the steps for both methods: 1. Fusion Splicing Fusion. This cable is coming from the wall and plugs into a box which in turn plugs into my router! I need to make this cable longer so I can move the box under my house and bring it up elsewhere. How do you extend your network?

If you get your hands on a Pre-terminated Fiber Optic Assembly and a couple of Media Converters, you're only a few steps away from. In this article we talk about some of the solutions that we have to overcome limitations on cable length for many common connection types. In each section you'll see the name of the interface, the maximum cable length without using boosters/repeaters and then what products we offer to extend that.
