How to turn off the OLT optical module

Overview

Be the first to know when we release Security Advisories, Install Guides & VIdeo Tutorials. Join our email list today to stay ahead.

Key Takeaways

To turn off the OLT optical module, you need to disable the laser on the PON port using the appropriate OLT commands or administrative interface.Disabling the Optical Module on Huawei OLTs

On Huawei OLTs, the optical module (laser) can be turned off by setting the PON port to an administrative Off state. The steps are as follows:

• Check the PON port status: Use the command display port info to view the current state of the PON port and confirm the laser is active .

• Turn off the laser: Execute the command port laser-switch disable to disable the laser on the PON port. By default, the laser is enabled, so this command effectively turns off optical transmission .

• Verify the change: Run display port state to ensure the laser status shows as disabled or the Admin State is Off . When the laser is disabled, the optical module will stop transmitting signals, but it may still receive optical signals from connected ONUs if the port is configured to do so .
Considerations for Other OLT Brands
• H3C OLTs: Similar functionality exists through the OLT port view commands. You can access the PON port configuration and use commands to disable the laser or set the port to an inactive state .

• Tellabs OLTs: While the Tellabs 1134-OLT6 manual primarily covers installation and power-up, the optical module can be turned off by removing power from the module or the OLT unit if no software command is available .
Safety and Operational Notes
• Disabling the optical module will interrupt service to all connected ONUs, so plan maintenance windows accordingly.

• Always verify the laser status after making changes to ensure the module is safely turned off.

• For troubleshooting or temporary shutdowns, consider using the administrative Off state rather than physically removing the module to avoid hardware damage. By following these steps, you can safely turn off the OLT optical module for maintenance, troubleshooting, or configuration purposes while minimizing risk to the network and connected devices .
