# How to use the media communication terminal box

## Overview

21-inch Structured Media Enclosures make running cable and managing media both simple and cost effective.

## Key Takeaways

A media communication terminal box connects your TV, internet, and phone services; proper setup involves connecting power, cables, and configuring the device according to the user manual.Step 1: Safety and Preparation

Before installation, ensure the power is turned off and follow all safety guidelines. Avoid placing the terminal box near water or high-voltage wiring, and use insulated tools when handling connections. Check that all cables (coaxial, Ethernet, HDMI) are in good condition and compatible with your device .

Step 2: Connecting the Device
• Power Connection: Plug the included power adapter into the terminal box and then into a wall outlet .

• TV Connection: Use an HDMI cable to connect the terminal box's HDMI output to your TV's HDMI input. If your TV does not support HDMI, an optical audio cable may be used for sound to an AV receiver .

• Internet Connection: Connect an Ethernet cable from the terminal box to your router for a wired connection, or configure Wi-Fi if supported .

© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved

• Antenna or Cable Input: Connect a coaxial cable from your wall outlet or antenna to the terminal box's input port. If your TV uses the box's tuner, connect a cable from the box's loop-out port to the TV .
Step 3: Initial Setup
• Power on the terminal box. Follow on-screen instructions to pair any included remote control and configure network settings .

• If the device supports apps or streaming services, sign in with your account or skip for later setup .

• Adjust TV settings to ensure the correct input source is selected.
Step 4: Using the Terminal Box
• Use the remote to navigate menus, access apps, or control TV functions such as volume and channel selection .

• For energy saving, some loop-out or standby features may need to be enabled in the settings menu .

• Regularly check for firmware updates to maintain performance and security.
Step 5: Troubleshooting
• If no signal appears, verify all cable connections and ensure the TV input matches the terminal box output.

• Restart the terminal box and router if network services are not working.

• Consult the user manual for error codes or LED indicator meanings . By following these steps, your media communication terminal box should be fully operational, providing integrated TV, internet, and phone services.
