How to wire a multimode 10 Gigabit optical module

Overview

Single-fiber bidirectional (BIDI) optical modules must be used in pairs. For example, SFP-10G-BXU1 must be used with SFP-10G-BXD1.

Key Takeaways

To wire a multimode 10G SFP+ module, use duplex LC connectors with OM3 or OM4 multimode fiber, ensuring proper polarity and hot-plug installation into the SFP+ port.Fiber Type and Module Selection

Multimode 10G SFP+ modules, such as 10GBASE-SR, operate at 850 nm and are optimized for short-reach links in data centers or enterprise networks. They are compatible with OM3 or OM4 multimode fiber, supporting distances up to 300 meters on OM3 and 400 meters on OM4 depending on fiber quality and network design . Ensure the module you select matches the fiber type and distance requirements.

Connector Type and Polarity

These modules typically use duplex LC connectors, which consist of two fibers: one for transmitting (TX) and one for receiving (RX). Correct polarity is critical:

• TX of the module must connect to RX of the opposite module.

© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved

• RX of the module must connect to TX of the opposite module. Use a standard duplex patch cable or a crossover cable if required by your network design .
Installation Procedure
• Inspect the fiber ends to ensure they are clean and free of dust or debris.

• Align the SFP+ module with the port on your switch, server, or storage device.

• Insert the module gently until it clicks into place; SFP+ modules are hot-swappable, so powering down the device is not necessary .

• Connect the duplex LC fiber cable to the module, ensuring TX and RX are correctly aligned.

• Verify link status on the device to confirm the module is recognized and the connection is active.
Additional Considerations
• Avoid exceeding the maximum transmission distance for your fiber type.

• Use OM3 or OM4-rated patch cords to maintain signal integrity.

• For high-density environments, label cables to prevent polarity errors.

• Some modules support digital optical monitoring (DOM) to check optical power and signal quality . By following these steps, you can ensure a reliable 10Gbps multimode optical link using SFP+ modules in your network infrastructure.
