List of 12-core Single-mode Fiber Optic Cables

Overview

Single Mode Fiber Optic Cable Fiber Optic Cable, Tight Buffer, Single-Mode, 12 Strand, TeraFlex® Reduced water peak, 900 Micron, OFNR, Riser, Indoor/Outdoo.

Key Takeaways

12-core single-mode fiber optic cables are designed for high-capacity, long-distance data transmission and come in various types including indoor, outdoor, armored, and bend-insensitive variants.Key Types and Specifications

1. Standard Single-Mode Fiber (OS1/OS2)

• Core/Cladding: 9/125 µm

• Typical Use: Long-haul telecom, backbone networks, FTTH, and data center interconnects

• Jacket: Indoor riser (OFNR), plenum (OFNP), or outdoor-rated

• Features: Low attenuation, supports distances up to 100 km without regeneration 2. Bend-Insensitive Single-Mode Fiber (G.657)

• Subcategories: G.657.A1 (enhanced bend performance), G.657.A2 (maximum bend insensitivity)

• Use Case: Tight spaces, indoor installations, 5G fronthaul, and high-density data centers

© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved

• Compatibility: Fully compatible with G.652.D fibers for seamless network upgrades
3. Armored 12-Core Cables

• Construction: Interlocking aluminum or steel armor for mechanical protection

• Use Case: Outdoor, direct burial, or areas with high rodent or physical risk

• Variants: Single jacket or double jacket, loose tube or tight buffer designs 4. Indoor/Outdoor Tight-Buffered Cables

• Features: Water-blocking, sunlight resistance, plenum or riser rated

• Use Case: Flexible deployment across indoor and outdoor environments

• Example: TeraFlex® 12-strand, 900 µm tight buffer, OS1/OS2, black jacket 5. Central Tube or Stranded Tube Designs

• Central Tube: Fibers housed in a single tube, suitable for riser or OSP applications

• Stranded Tube: Multiple tubes stranded around a central strength member, ideal for high-fiber-count outdoor networks

• Use Case: Backbone networks, campus networks, and high-density interconnects 6. Specialty Single-Mode Fibers

• Polarization-Maintaining Fiber: Bowtie-shaped stress rods for coherent optics and precision instrumentation

• Multi-Core Variants: Some 12-core designs may integrate spatial division multiplexing (SDM) for advanced telecom and data center interconnects
Applications
• Telecommunications Backbones: Long-haul and metro networks

• Data Centers: High-speed interconnects, 40G/100G Ethernet, MPO/MTP trunking

• 5G Networks: Links between remote radio units (RRU) and baseband units (BBU)

• Enterprise Networks: Building backbones connecting MDF to IDF across floors
Summary

12-core single-mode fiber optic cables are versatile and available in multiple configurations to meet diverse deployment needs. Key considerations when selecting a cable include fiber standard (OS1/OS2, G.657), jacket type (plenum, riser, outdoor), mechanical protection (armored vs. non-armored), and installation environment (indoor, outdoor, or mixed). These cables are essential for high-capacity, long-distance, and high-density network applications.
