My home was upgraded to fiber optic so I need to change my router

Overview

When switching to fiber internet, many users wonder if they're able to use their own router instead of the one provided by their internet service provider (ISP). In this guide, we'll explain router compatibility, setup steps and whether upgrading your router is necessary to maximize fiber speeds. Instead of using your old router, a high-performance Wi-Fi router designed for fiber optic internet will ensure you seamless streaming, online gaming, and remote work all over your space. However, the market is flooded with countless options, making the selection quite overwhelming. This post will be helpful when you're ready to replace your current router. Let's dig in! Dong's note: I first published this post on December 30, 2023. A fiber-optic connection is the best choice for fast home internet as it has a number of advantages compared to traditional copper cables, such as faster speeds and less interference. I worked with the Cybernews research team to review and compare different routers and give. This review aims to unveil some of the best fiber optics routers on the market by focusing on their key features and showing how they would become efficient tools for both home and office networks.
