New Standards for Distribution Boxes 2017

Overview

In this interactive online course we discuss notable changes that include the addition of a new column in Table 312. 6 (A), new box fill requirements for barriers in boxes, clarifying the rules for cables entering enclosures, and new rules for separable attachment fittings. HSE Alert #14 emphasizes the need for compliance with electrical distribution box standards across all projects by January 31, 2018. 3 to BS 7671:2008 (IET Wiring Regulations Seventeenth Edition), which was published in January and comes into effect on 1 July, will include a new regulation requiring consumer units and similar switchgear assemblies in domestic premises to have a non-combustible enclosure. Due to decreasing boulevard space in new developments and extensive breakage of the existing boxes, Distribution Standards has developed a standard lightweight service box suitable for installation. Automotive OEMs use and/or encourage the use of Returnable Transport Items/Returnable Packaging Items (RTI/RPI) to move parts from their suppliers to their production plants or after-sales facilities. The parts are placed in returnable packaging and often arranged in a way that facilitates movement. Neighborhood Delivery Center is a freestanding, sheltered or enclosed installation containing a large number of individually locked, wall-mounted mailboxes.
