# Number of ports on a gigabit fiber optic switch

## Overview

Gigabit Fiber Optic Switch offers 8 RJ45 ports, 2 SC fiber ports, PoE support, energy efficiency, and auto-restart for reliable, high-speed network performance. A Gigabit SFP switch is a network switch that primarily operates at 1 Gigabit per second and is equipped with Small Form-Factor Pluggable (SFP) ports, which are hot-swappable interface slots for easy maintenance and upgrades. Unlike fixed RJ45 copper ports, SFP ports support both fiber and copper modules, enabling far longer distances, greater flexibility, and improved scalability in enterprise. Gigabit Ethernet Ports: 8 RJ45 ports for high-speed 10/100/1000 Mbps data operation. Optical Fiber Network: 2 x SC optical ports (1310/1550nm) included for long-distance fiber optic connections. PoE Support: Power over Ethernet offers simple installation with a single cable for data and power. The hardware includes 100 megabit/gigabit / 10-gigabit rate ports, electrical/optical/ PoE port, port number, MAC address table depth, forwarding delay, cache size, VLAN, isolation, etc. Various port sizes are available ranging from 4 up to 52 ports. We offer solutions that provide seamless transmission and conversion.
