PE wire of secondary distribution box

Overview

The PE conductor must have a cross-section of at least 10 mm 2 or must have a second PE connection with a cross-section at least equal to the mains feeder (cf. The PE connection is a screw bolt on the module casing (see front view) for attaching PE lines and. Protective conductor (identification: PE): conductor provided for purposes of electrical safety (source IEC 60050-195:2021). A feeder usually begins with a feeder breaker at the distribution substation. Many feeders leave substation in a concrete ducts and are routed to a nearby pole. These conductors conduct fault current due to insulation failure (between a phase conductor and an exposed. secondary unit substation is a close-coupled assembly consisting of enclosed primary high voltage equipment, three-phase power transformers, and enclosed secondary low-voltage equipment. electrical distribution box refers to a low-voltage distribution device that installs switchgear, measuring instruments, protective appliances and auxiliary equipment in a closed or semi closed metal.
