Price of drop cable laying in conduit

Overview

Professional network cabling in 2026 typically costs $150-$250 per commercial Cat6 drop, $200-$350+ per harder Cat6A commercial drop, and $200-$400 for isolated finished-wall additions where minimum service-call labor dominates. Open-wall pre-wire lowers the per-drop cost. Costs to install electrical conduit typically vary by material, diameter, and accessibility. This guide breaks down price drivers, provides per-foot ranges, and shows real-world pricing to help buyers estimate a project budget accurately. Finished-wall retrofits. Running a new cable line in a home is often necessary for modern living, whether to support a new appliance, a faster network connection, or an updated entertainment system. This process involves installing new electrical wiring for power, low-voltage data cables like Cat6 Ethernet, or coaxial. Prices can range from $1 to $50+ per linear foot depending on the method and complexity.
