Regarding H3C and Huawei optical module models

Overview

Optical Modules in General-Purpose Computing Scenarios Huawei offers a comprehensive portfolio of pluggable StarryLink optical modules for data center netw.

Key Takeaways

H3C and Huawei optical modules are pluggable transceivers used in switches and data centers, but Huawei modules are generally not directly compatible with H3C switches due to vendor-specific authentication and encryption.Overview of Optical Modules

Optical modules are photoelectric transceivers that convert electrical signals into optical signals for transmission over fiber and then back into electrical signals at the receiving end. They are widely used in telecommunication networks and data centers to meet increasing bandwidth demands. Common types include SFP, SFP+, QSFP, QSFP28, CFP, CFP2, CFP4, and CXP, supporting speeds from 10G to 400G and beyond . Huawei offers a portfolio of StarryLink optical modules designed for plug-and-play deployment in data center networks, supporting flexible interface requirements and high-speed interconnects . H3C modules are similarly used in enterprise and carrier-grade switches, with authentication mechanisms to ensure device compatibility .

Compatibility Between H3C and Huawei Modules

© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved

Huawei optical modules cannot be directly used on H3C switches because both vendors implement vendor-specific authentication and encryption. These mechanisms require modules to have special codes to match the switch hardware and firmware, preventing unauthorized or third-party modules from functioning normally . However, some third-party vendors produce compatible modules with pre-written codes to bypass these restrictions, allowing them to work on H3C switches while reducing costs . When a non-H3C module is installed, H3C switches may generate alarm messages indicating the module is uncertified. These alarms do not prevent the module from functioning, but H3C does not guarantee performance or maintenance for third-party modules. CLI commands are available to suppress these alarms on H3C switches .

Recent Developments in Optical Technology

Huawei has been actively investing in high-speed optical chip technology, including indium phosphide (InP) chips for 800G and 1.6T optical modules. These chips are critical for AI data centers, 6G all-photonic wireless base stations, and high-speed interconnects, offering performance advantages over traditional silicon-based modules . This indicates Huawei's ongoing focus on next-generation optical modules for high-bandwidth applications.

Summary

• Function: Convert electrical signals to optical signals and vice versa for high-speed data transmission.

• Types: SFP, SFP+, QSFP, QSFP28, CFP, CFP2, CFP4, CXP.

• Compatibility: Huawei modules are generally not compatible with H3C switches without third-party modifications.

• Third-party modules: Can provide cost-effective alternatives with pre-written codes to bypass vendor restrictions.

• Industry trend: Huawei is advancing high-speed InP optical modules for 800G–1.6T applications, supporting AI and 6G infrastructure. Understanding these aspects is crucial for network engineers and data center operators when selecting optical modules for H3C or Huawei equipment.
