Relay Protection iOS

Overview

When iCloud Private Relay is on, the traffic leaving your iPhone is encrypted and sent through two separate internet relays. This prevents websites from seeing your IP address and exact location while preventing network providers from collecting your browsing activity in Safari. Acting similarly to a VPN, it enhances security and privacy, particularly when using Safari on Apple devices. Private Relay comes included with any iCloud+ subscription, starting at just $0. And there lies the difference between iCloud+ Private. An overlooked feature to keep your browsing private is enabling the Private Relay setting. Here's how to turn it on now and why you should. It can be managed by network (Wi-Fi and data) and allows you to temporarily display your.
