Remote relay protection system

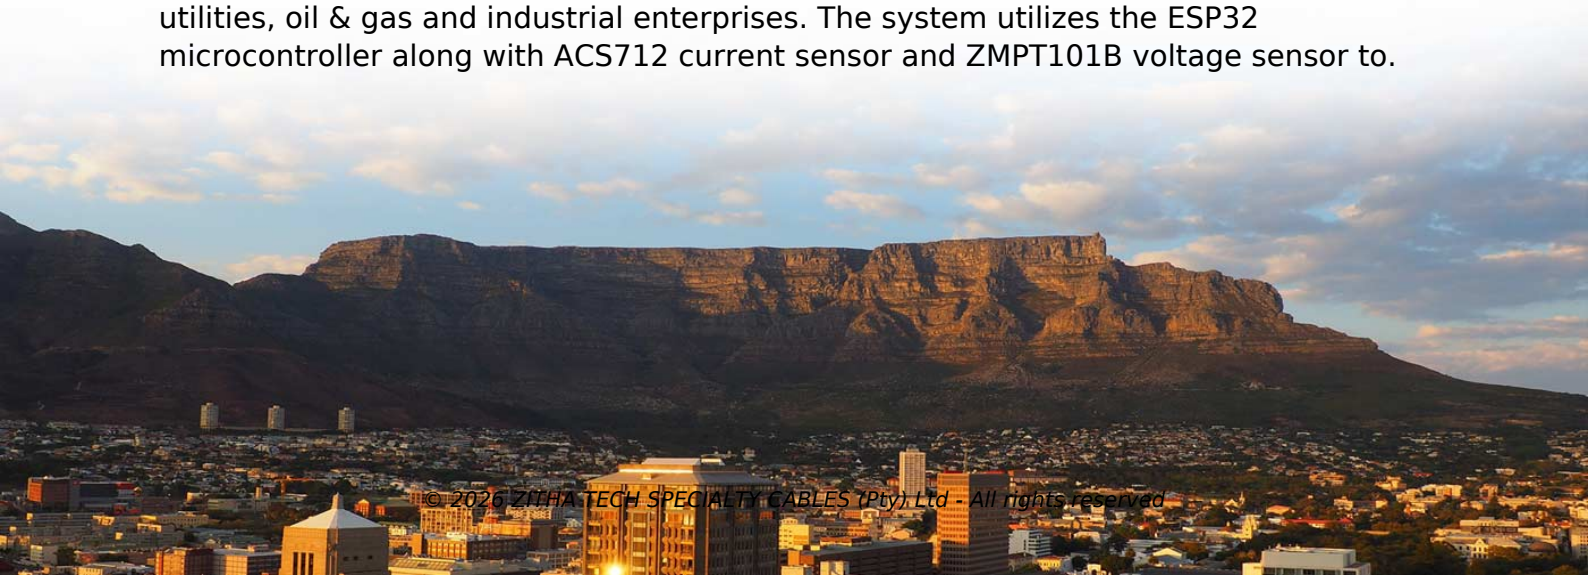

Overview

This e-paper provides you with a compact overview of our network-capable remote relay system. Get ready for the future of automation for simple applications with our PLC-INTERFACE Ethernet Gateway.

Key Takeaways

The proposed system detects abnormal conditions including overload, short circuit, voltage fluctuation, and line faults, and automatically disconnects the power supply using a relay module to prevent equipment damage and improve electrical safety. PLC-INTERFACE Ethernet Gateway: The modular remote relay system supports simple applications with up to 56 I/O channels. Benefit from a high degree of flexibility and intuitive configuration due to compatibility with established control software. The most common is transmission line protection. Ajax relays' versatile settings and low power consumption make. Protective relays and devices have been developed over 100 years ago to provide “last line” of defense for the electrical systems. The selection and applications of. RTSoft Relay protection monitoring, diagnostics and operation assessment system is a comprehensive solution for automating the workflow of protection engineers who service relay protection devices (IEDs) in power utilities, oil & gas and industrial enterprises. The system utilizes the ESP32 microcontroller along with ACS712 current sensor and ZMPT101B voltage sensor to.
