Notes:

• The boxes are designed for pole-mounted service distribution in overhead electricity networks .

• MCBs (Miniature Circuit Breakers) must comply with SANS 556 and have a short-circuit breaking capacity of 5 kA .

• DIN rails accommodate split prepayment meters for each customer connection .

• The configuration allows for streetlight connections alongside customer supplies .

• All installations must comply with SANS 10142-1:2017 for low-voltage wiring and distribution .
Compliance and Standards
• SANS 10142-1 specifies the design, installation, and safety requirements for low-voltage electrical installations in South Africa, including component standards and cable specifications .

• Eskom ST_240-75659760 outlines the manufacturing and configuration requirements for pole-mounted distribution boxes, ensuring uniformity and safety across the network .

• Components such as cables, MCBs, and safety signage must meet relevant SANS and NRS standards (e.g., NRS 017, SANS 1186, SANS 1507), .
Practical Considerations
• Distribution boxes should be installed in accordance with local authority regulations and inspected regularly for compliance .

• The configuration table can be adapted for single-phase or three-phase systems, depending on the load and customer requirements.

• Split prepayment meters allow for individual customer billing while maintaining centralized control and safety. This table and configuration guide provide a comprehensive reference for designing, installing, or inspecting South African low-voltage distribution boxes in compliance with national standards and Eskom requirements.
