ZITHA TECH SPECIALTY CABLES (Pty) Ltd

Standard thickness of fireproof metal cable trays

Overview

 Available in standard height from 40mm up to 110mm. Fire Resistance Certification (E30-E60-E90) according to DIN 4102-12 is available. All illustrations, descriptions and technical information included in this document are provided as indications and can cable trays are equivalent. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned. of galvanized products is a linear function of the thick-ness of he zinc coating. Route Planning and Layout Principles Coordinate with Building Structure: Cable tray routing should align with architectural design, avoiding unnecessary. Cable Trays are designed to meet most requirements of cable and electrical wire installations and comply to local and international standards of fabrications and finishes. SFSP cable trays and accessories from SFSP are manufactured from steel sheets in accordance with BS EN 10130/BS EN 10131/ BS EN. Selection: Use primers with strong adhesion and anti-corrosion properties. Material Selection: Fireproof coatings must comply with national safety standards. Covers construction, materials, dimensions, load capacity, and testing.
