The function of cable tray cable pullers

Overview

They serve as a practical alternative to pulling every cable through individual conduit pipes, which is labor-intensive for complex systems.

Key Takeaways

The function is to provide a continuous, supported pathway that prevents cables from lying loose and vulnerable to physical damage. The system includes straight sections, fittings, and support hardware. Straight sections handle the bulk of the cable run, while fittings such as bends, tees, and. maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray cont d for instrumentation and control applications that require. The cable tray functions are designed to protect and organize cables, ensuring the safe operation of electrical and communication systems. Fittings can, on the one hand, be used for horizontal or vertical changing of the routing direction or, on the other, to change the height or width of the.
