What does TCT stand for in cable trays

Overview

TC cables are rated for 600 volts and can be used in industrial power or control circuits, where flame retardant cables are desired.

Key Takeaways

TCT in cable trays typically stands for "Tray Cable, Thermoplastic" or a variant of tray-rated cable designed for installation in cable trays.Definition and Context

In cable tray systems, TCT refers to a type of tray cable that is factory-assembled with two or more insulated conductors under a protective jacket, designed for power, control, or signal circuits. These cables are rated for installation directly in cable trays, raceways, or channels, and are built to withstand harsh industrial environments, including exposure to moisture, chemicals, and mechanical stress .

Key Features of TCT/Tray Cables
• Multi-conductor construction: Two or more insulated conductors, sometimes with a grounding conductor, integrated under a single jacket .

• Voltage rating: Typically up to 600 volts for industrial power and control circuits .

• Durability: Flame-retardant, impact-resistant, and suitable for indoor or outdoor use, depending on the specific type .

• Variants: Includes TC (Tray Cable), TC-ER (Exposed Run), and sometimes TCT to indicate thermoplastic or temperature-rated versions suitable for short exposed runs or specific environmental conditions .
Applications

© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved

TCT cables are widely used in industrial, commercial, and utility installations where cable trays are employed for organized routing of electrical wiring. They are ideal for:

• Power distribution and control circuits

• Signal and instrumentation wiring

• Environments requiring flame retardance and mechanical protection

• Short exposed runs from cable trays to equipment when rated for ER (Exposed Run) applications
Installation Considerations
• Must comply with NEC (National Electrical Code) standards, including UL 1277 listing for tray cables .

• Standard TCT cables are generally restricted to cable trays or raceways; exposed runs may require TC-ER or conduit protection .

• Proper support and securement are required, typically at intervals not exceeding six feet for ER-rated cables . In summary, TCT is a specialized tray cable designed for safe, reliable installation in cable trays, often indicating thermoplastic insulation or temperature-rated construction suitable for industrial and commercial electrical systems.
