What kind of machine is used for pulling cables and fiber optic cables

Overview

Hydraulic cable pulling machines are specially designed for pulling a wide range of fiber optic, LV-HV power cables, telecommunication lines and heavy industrial cables. It can be used safely in both underground and overhead line projects. It uses a rechargeable lithium Iron Phospate Battery with an adjustable limit to the pulling tension of the capstan. Only the Condux puller can offer load cell torque input for the most accurate tension measuring available. Unlike most hydraulic measuring systems, this system is not affected by changes in. Modern cable pulling winches deliver precise tension control for runs exceeding 1,000 feet. These tools maintain optimal pulling forces between 900–1,500 lbs (Electrical Safety Report 2023), preventing insulation damage during long conduit installations. Key models feature automatic load sensing. The quality tools from Katimex® are easy, safe and quick to use. The advantages of the Katimex fiberglass (fbr) pulling rods, Polykat are only. The below article explores the best practices and tools commonly used to pull fiber optic cable. The Future Ready Solutions Tools & Test Equipment collection explores these solutions in greater detail. Our News & Insights library is also a wealth of knowledge, and we offer articles that delve. Thorne & Derrick International distribute the most extensive range of Cable Pulling & Cable Laying Equipment to enable the installation of low, medium and high voltage power cables into underground trench or duct – products also supplied for fibre optic blowing, subsea trenching, offshore umbilical.
