Where should the low beam control module be installed

Overview

Where the module is used for high and low beam headlight control, the module takes the place of a traditional floor or column mounted dimmer switch and can be mounted high up under the dash to clear up the floor area. The module senses whether the headlights are on or off by use of the power output. Once your brand-new high and low-beam bulbs are prepared, you're ready to do the installation procedure. Always unplug your car's battery ground terminal before doing the replacement. Start the installation by connecting the high beam bulb's blue wire to its indicated terminal. Using an LDR sensor, LM358 comparator, and relay mechanism, this system ensures you get full visibility. If your running a LED bar through the highbeam switch, i would recommend adding a relay and drive both the high beams and LED bar from the relay. Thanks for the info! My original thought was to wire the. Does the entire Body Control Module need to be replaced if only one of its feeds is malfunctioning?

Correction - I replaced all "4" fuses in the engine compartment fuse block that relate to Body Control Module. One more thing, I plugged an OBD scanner into the car and there are no error codes. Did. Low beam on left stopped working after 3 months after I installed new AlphaRex 6K HID headlight assembly units.
