ZITHA TECH SPECIALTY CABLES (Pty) Ltd

Which non-standard electrical distribution box is better in Azerbaijan

Overview

A commonly used distribution box contains doorbells, earth leakage devices, timers, or contact breakers.

Key Takeaways

For non-standard electrical distribution boxes in Azerbaijan, metal and modular plastic boxes like the TAIXI PZ30 or XLW series are generally preferred for durability, flexibility, and compliance with local low-voltage systems.Key Types of Non-Standard Distribution Boxes

1. Metal Distribution Boxes (WS-RDB Series)

• Constructed from 1.0–1.2 mm cold-rolled steel with powder-coated finish (RAL7035/7032)

• Rated for AC 220V/240V with maximum loading current suitable for residential and small commercial setups

• Durable, corrosion-resistant, and suitable for indoor or semi-outdoor installations

• Ideal for environments requiring mechanical strength and long-term reliability 2. Plastic Modular Boxes (TAIXI PZ30 / Merlin Gerlin MCB)

• Made from high-quality thermosetting plastic

• Compatible with single-phase two-wire or four-wire systems

© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved

• Lightweight, easy to install, and resistant to electrical insulation failures

• Suitable for residential and light commercial applications where flexibility and safety are priorities 3. XLW Series Integrated Distribution Boxes

• Designed for power grid construction and transformation

• Incorporates multiple components for power control, protection, and distribution

• Modular design allows easy expansion and maintenance

• Recommended for medium to large-scale installations in industrial or commercial settings 4. Fiber-Optic Distribution Boxes

• 19" 1U or 2U sizes with splice trays and FC/SC adapters

• Primarily for telecommunication and data network integration

• Excellent mechanical performance and convenient maintenance

• Not typically used for standard electrical power distribution but essential for hybrid electrical-communication setups
Selection Considerations in Azerbaijan
• Voltage and Current Ratings: Ensure compatibility with local low-voltage systems (up to 240V AC for residential, higher for industrial).

• Material and Durability: Metal boxes are preferred for harsh environments; plastic boxes are suitable for indoor and lightweight applications.

• Modularity and Expansion: Modular boxes like XLW series allow future upgrades without full replacement.

• Compliance with Local Standards: Boxes should meet Azerbaijani electrical safety regulations and be compatible with Azerishig and Azerenergy distribution networks .

• Installation Environment: Outdoor installations require weatherproof and corrosion-resistant materials; indoor setups can use lighter plastic boxes.
Recommendation

For residential or small commercial use, the TAIXI PZ30 plastic box or WS-RDB metal box offers a balance of safety, durability, and ease of installation. For industrial or larger commercial applications, the XLW series integrated distribution box is better due to its modularity and capacity to handle higher loads. Fiber-optic boxes are recommended only if integrating communication networks with electrical distribution. Choosing the right box depends on load requirements, installation environment, and future expansion needs, ensuring both safety and operational efficiency in Azerbaijan's electrical infrastructure.
