ZITHA TECH SPECIALTY CABLES (Pty) Ltd

Which port should the fiber optic cold connector be inserted into

Overview

Optical fiber fast connector/cold connection skillsIt is essential to ensure that the fibers are aligned correctly using the connector's alignment mechanis.

Key Takeaways

A fiber optic cold connector should be inserted into a port that matches its connector type and polish, typically an SC/APC or SC/UPC adapter on an OLT, ONT, or patch panel.Connector Type and Port Matching

Fiber optic cold connectors, also called fast connectors or mechanical splices, are designed for quick field termination without fusion splicing . The most common types are:

• SC/APC (green housing, angled polish): Used in GPON, EPON, and CATV networks where low back reflection is critical .

© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved

• SC/UPC (blue housing, ultra-physical contact polish): Suitable for general single-mode applications but should not be mated with APC ports to avoid excess insertion loss . The connector must be inserted into a port that matches both the connector type and polish. For example, an SC/APC cold connector should only be plugged into an SC/APC adapter or port; plugging it into an SC/UPC port can cause 3–4 dB excess loss and damage the ferrule endfaces .

Typical Ports for Cold Connectors

• OLT (Optical Line Terminal) ports: SC/APC ports on GPON or EPON OLTs are standard for drop cable connections.

• ONT (Optical Network Terminal) ports: Customer premises devices often have SC/APC or SC/UPC adapters for direct connection of drop cables.

• Patch panels and distribution boxes: SC adapters are commonly used for terminating pre-terminated drop cables or fast connectors in FTTH deployments .

• Test equipment: Some ST or LC ports may be used for temporary testing, but the connector type must match the device interface .

Installation Tips

• Insert the fiber slowly into the mechanical splicing mechanism to avoid damage .

• Keep the dust cover on until ready to connect.

• Ensure the fiber type (single-mode or multimode) and cable diameter are compatible with the connector .

• Verify that the adapter or port is clean and free of debris to minimize insertion loss and back reflection .

Summary

To ensure optimal performance, always insert the fiber optic cold connector into a port that matches its type (SC, LC, ST) and polish (APC or UPC). Commonly, SC/APC cold connectors are used for GPON/FTTH drop cables and should be connected to SC/APC adapters on OLTs, ONTs, or patch panels. Proper alignment, cleanliness, and careful insertion are essential for low-loss, stable optical connections.
